

THE REAL COST OF CHEMICALS

DIRECT COSTS

Chemical Purchase

More products needed to keep facilities clean and disinfected; increasing monthly chemical costs.

Labor

With several steps for use, employees require more time to learn proper handling procedures and spend more time prepping chemicals daily.

INDIRECT COSTS

Inefficiencies

Chemical disinfectants require upwards of 10 minutes to thoroughly disinfect leaving employees two options; wait or alter protocol.

Processing & Invoicing

Time spent tracking, ordering and receiving chemical shipments regularly reduces time available for other tasks.

Damages

Harsh chemical compounds reduce the life expectancy of surfaces, so facility decor and finishes are replaced more frequently.

OPPORTUNITY COST

Branding

More knowledgeable and demanding consumers demonstrate higher preference and loyalty to companies focused on safety and environmental responsibility.

Special Markets

Growing awareness of health conditions and triggers has led to special markets with very specific needs and considerations.

WHERE DO CHEMICALS COST YOU THE MOST?

Most facilities spend hundreds on chemical cleaners every month, but don't figure the indirect and lost opportunity costs.

What could you save by replacing the chemical disinfectants and cleaners at your facility?
